

CYBERPUNK TERMUX CODEX IDE

The zero-install, AI-native IDE that ships running apps — not snippets.

Investor Deck • 2026

AI IDEs hand you fragments. You still spend hours making them run.

- ✗ **Snippets, not apps**
Generated code rarely boots without manual wiring.
- ✗ **'You need to install X'**
AI defers setup to you, killing momentum.
- ✗ **Local install required**
VS Code, Cursor, Codespaces all demand setup.
- ✗ **Export = good luck**
No first-class path from prompt to shippable artifact.

Generate → Preview → Refactor → Export.
Under 5 minutes. Zero installs.

01

GENERATE

Complete runnable build.
Wired entry points. No
TODOs.

02

PREVIEW

Live in-browser Sandpack
boots the app instantly.

03

REFACTOR

Agentic copilot extends
without breaking the build.

04

EXPORT

10 targets — PWA, web,
desktop, mobile, extensions.

One prompt. One running app.

The image shows a screenshot of the Cyberpunk Termux IDE interface. The top bar displays the title 'cyberpunk-termux-ide' and the current file path 'neon-notes/App.tsx'. The left sidebar shows a file explorer with the following structure:

- src
 - components
 - hooks
 - App.tsx (selected)
 - main.tsx
 - index.css
- public
 - package.json

The main editor area displays the following TypeScript code:

```
import { Board } from './components/Board';

export default function App() {
  return (
    <div className='neon-grid'>
      <Board />
    </div>
  );
}
```

On the right side, there is a 'LIVE PREVIEW' window showing the rendered application. The preview has a dark purple background and features the title 'NEON NOTES' in bright green. Below the title, there are three colored rectangular buttons:

- A red button labeled 'Buy oat milk'.
- A blue button labeled 'Pitch deck v3'.
- A yellow button labeled 'Sign EV cert'.

WHY IT'S DIFFERENT

Built-in, not bolted-on.

	OTHER AI IDEs	CYBERPUNK TERMUX
Output	Snippets & scaffolds	Complete runnable apps
Install	Local setup required	Zero install — PWA
Models	One tier, one model	4 tiers, 8+ models, BYOK
Export	Manual / partial	10 targets, signed-ready
Identity	Generic VS Code clone	Distinct cyberpunk brand
Chat	Sidebar afterthought	Agentic build-finisher

**Developer tools is a \$30B+ market
in a generational AI reset.**

\$30B

TAM

Global developer tools spend
(Gartner, 2025)

\$8B

SAM

Cloud + AI-augmented dev
environments

\$420M

SOM

Indie + accelerator + SMB segment,
year 3

Builders who measure success in hours, not sprints.

INDIE HACKERS

Ship MVPs in an afternoon. Pro tier, \$19/mo.

DEV AGENCIES

White-label client builds. Team tier, \$99/seat.

YC / TECHSTARS

Idea → investor demo, same day. Premium tier.

EDU & BOOTCAMPs

30 students, zero install, 60-second onboarding.

ENTERPRISE INNOV.

Internal-tool factory. SSO, SOC 2, \$40k-\$150k/yr.

Four tiers. Built-in BYOK. Monetization rails already wired.

FREE

\$0

Flash models, daily cap.
Onboarding & trial.

PRO

\$19/mo

All Pro models, voice
playback.
Individual builders.

PREMIUM

\$49/mo

gpt-5.2, agentic mode,
Live Voice, Build Mode.

BYOK

\$9/mo

Bring your own OpenAI /
Anthropic / Gemini key.

TRACTION

Live in production. Wired for growth.

WoW growth

SHIPPED

- ◆ Live at cyberpunk-termux-ide.lovable.app + custom domain
- ◆ Full plan architecture (Free / Pro / Premium / BYOK) wired DB → edge → UI
- ◆ 10 export targets in production (PWA, web, 3 desktop, 2 mobile, 2 extensions)
- ◆ Native build CI pipeline (Windows / macOS / Linux) running on tag
- ◆ Lady Violet agentic copilot with undo system + 8+ AI models

Three phases to enterprise-ready revenue.

P1 • WEEKS 1-3

STRIPE ACTIVATION

4-tier checkout, 14-day Premium trial, billing portal, webhooks → user_plans. Target: \$1k MRR in 60 days.

P2 • WEEKS 3-6

SIGNED NATIVE BUILDS

EV cert (Win), notarization (macOS), Play + App Store listings. Target: 1k installs in 90 days.

P3 • WEEKS 6-10

ENTERPRISE READY

SAML SSO via Lovable Cloud, SCIM, audit log, SOC 2 Type I. Target: 1 LOI in 90 days.

STRETCH

ADJACENT REVENUE

Extension marketplace 80/20 split, template store, usage overage, white-label.

We win on the loop — not the editor.

	Zero install	Complete builds	Multi-tier AI	10 export targets	Branded identity
Cyberpunk Termux	✓	✓	✓	✓	✓
Cursor	✗	~	✗	✗	✗
VS Code + Copilot	✗	✗	✗	✗	✗
Replit	✓	~	~	~	✗
Lovable / Bolt	✓	✓	~	~	~

Built-in, secure, tier-aware from the ground up.

- **BUILD CONTRACT**
Enforced in every edge function system prompt. Generate & Refactor must boot the preview before finishing.
- **TIERED AI ROUTING**
useUserPlan hook + codex-agent edge function gate models per tier. BYOK keys encrypted at rest.
- **SECURITY-FIRST**
RLS on every table. Roles in dedicated user_roles + has_role(). JWT on every function. SOC 2 in flight.
- **NATIVE BUILD PIPE**
Electron + Capacitor configs in repo. Tag-triggered CI builds all 5 platforms.
- **EXTENSION SDK**
Sandboxed iframe extensions with controlled message bridge. Marketplace revenue share unlocks Phase 4.

THE ASK

Raising \$[X]M seed to ship paid tiers, signed builds, and SOC 2.

40%

Engineering — payments, native CI, enterprise SSO

25%

Compliance — SOC 2 Type I + II, security audits

20%

Growth — content, accelerator partnerships, paid trials

15%

Operations — support, finance, legal

18-MONTH TARGETS

\$1M ARR • 10k DAU • 3 enterprise contracts • SOC 2 Type II

Generate. Preview. Refactor. Ship.

The IDE that finishes the build.
